

PX Series:

PX pumps are specifically designed for industrial and agricultural use. Its volume impeller makes it able to pump water that is even fairly dirty. High delivery rates under continuous or heavy duty, making them advantageous for rain and gravity irrigation, for pumping water from lakes, river, well and for a wide variety of industrial uses where high delivery rates must be achieved at low to average heads. With a single centrifugal impeller cantilevered on the motor shaft directly, the PX series pumps have a compact size, extremely reliable, very simple to use and almost maintenance-free.

*These pumps should be installed in a covered area, protected against the weather.

PERFORMANCE SPECIFICATIONS

Model	Voltage (V)	Freq. (Hz)	Speed (r.p.m)	Power(kW)		Q L/min	Max. Head	Max. Suct.Head (m)	Inlet/Outlet (Inch)		Net Weight (kg)	Packaged Dimension (mm)
				In	Out				In	Out
